GAL CESANA

SOFTWARE ENGINEER | BACKEND & DISTRIBUTED SYSTEMS

Tel Aviv, Israel | +972-52-408-5511 | galcesana8@gmail.com | Portfolio | GitHub | LinkedIn

PROFILE

Backend engineer at CrowdStrike, promoted from Software Engineering Intern to Engineer I. Build and ship distributed identity-security services in Go and Java, with hands-on ownership of production rollouts, reliability improvements, observability, and AI-powered internal tooling.

EXPERIENCE

CrowdStrike Engineer I, Identity Protection Core Services (promoted from intern) Aug 2025 – Present

Tel Aviv, Israel

- Owned a three-region production rollout of a new identity-endpoint policy; designed and executed a staged backfill for 22,320 customer tenants while preserving existing configurations for 2,921 tenants.
- Implemented macOS policy support and fixed distributed compliance-retry logic, allowing devices that missed updates while offline to resynchronize; shipped behind feature flags and validated end to end.
- Shipped sensor-health auto-recovery in Go and Java to clear stale watchdog warnings after restarts; 256 automatic status clears were recorded across 111 customer tenants in the first 24 hours.
- Identified a pre-launch control-plane defect that would incorrectly disable security inspection on 286 domain controllers; quantified customer impact using production telemetry before release.
- Designed and deployed an LLM-based Slack alert investigator integrating logs, metrics, change history, and runbooks; handles approximately 280 production alert posts per week.

SAIPS / Ford ML Data Annotation & Automation 2021 – 2022

Tel Aviv, Israel

- Built automation scripts for dataset preparation and annotation workflows supporting autonomous-vehicle ML teams.

Israel Defense Forces HR Officer (Captain) 2018 – 2021

Israel

- Led a 12-person team responsible for personnel operations in a 500-member unit, including planning, data systems, and logistics.

SELECTED PROJECTS

NBA Predict | Python, PyTorch, FastAPI, Streamlit | Live app · Code

- Built an end-to-end NBA prediction platform combining sequence models, team performance, injuries, and sentiment to generate calibrated win probabilities.

HUJI Run App | Next.js, Supabase, Strava, PWA | Live app

- Developed a mobile-first running-team platform with role-based access, membership workflows, and training visibility for athletes and coaches.

EDUCATION

The Hebrew University of Jerusalem | B.Sc. Computer Science

Selected coursework: Machine Learning (97), Software Engineering (95), Operating Systems (87), NLP, Algorithms

TECHNICAL SKILLS

Languages: Go, Java, Python, TypeScript, JavaScript, C++, C, SQL

Backend & Infrastructure: Microservices, Kafka, REST APIs, Docker, CI/CD, Git, MongoDB, Redis, Prometheus/Thanos, LogScale

AI & ML: LLM agents, n8n, PyTorch, scikit-learn, FastAPI, ML model evaluation
